

Modeling the Extended Living Intelligence Field

A Pseudo scientific, drug induced, poppycocked model of reality

Research indicating that...

1. ELIF supports the transfer in information (I am deliberately leaving out the “gut feeling” because as the gut and its relation to the brain is very complex it is not unreasonable to suggest that the gut has physical senses we have not yet explored.)
 - a. ESP ¹
 - b. Telepathy
 - c. Intuition
 - d. Remote Viewing
 - e. Ideation, both submission and reception (via morphic field)
 - f. Morphic field memory ²
2. ELIF can act as an interface between observations in the material world and intention.
 - a. psychokinesis
3. ELIF Information transference is not (always?) constrained by conventional time, meaning information from future events can be known before they happen, and causes can be retroactively changed to produce real-time results
 - a. Premonition
 - b. Presentiment
 - c. Time-reversal ³
4. The ELIF occupies as space and consists of information either as clusters (material presence), or information (vacuum) ⁴

Teonanácatl

1. The arena of time-space is finite
2. All phenomena with time-space are wave functions
3. Waves have very little inertia, and therefore eventually dissipate (this was difficult to see because of the complexity of the ever growing interactions of waves)
4. Waves “echo” when they reach the finite limits of time-space
5. An initial wave (P-wave) was introduced into time-space by a force that continuously moves throughout the finite time-space arena.
6. The P-wave generating force is always moving and therefore always generating more P-wave
 - a. The following is not 100% clear
 - i. The interaction of two P-waves do not interfere but rather create a third residual wave (R-wave)
 - ii. R-waves create interference and therefore are capable to creating standing wave patterns
7. All matter is a standing wave pattern (SWP). Complex matter are patterns of SWPs, or SWPs of SWPs
8. All that is not matter is still filled with waves but not complex or stable enough to create SWP
9. Waves alone are the prime energy source of creation in time-space
10. Intelligence is a byproduct interfering waves (P and R?)
11. The degree of intelligence that can be supported (or created?) is proportional to the complexity of the SWP clusters. Therefore everything that exists has some form of intelligence.
12. P/R-waves are (maybe) the quantum wave functions, and as such, at the moment of awareness they collapse into particles.
13. (presumption) P-waves are 3D presentations of 4D phenomena moving through the 3D space, which would imply ‘entanglement’ within the 3D between different points of the wave (which present as distinct particles when collapsed) as the 4D source is one 4D object that is seen as 3D+time in 3D space. R-waves have no 4D-R-wave source, as they are consequences of P-wave interaction, but would have a virtual 4D-R-wave source, i.e. a virtual source that could create R-waves if it existed. *Can the virtual 4D-R-wave have any effect on the 4D-P-wave object, thereby creating a feedback loop of some sort?*
14. As P/R-waves are not material they can move faster than the speed of light, and therefore cause/effect relationship are not bound by linear time. I.e. the measuring of test results can alter the initiation of the test case.^{5 6}

if/then

As all waves are interacting with all other waves, directly or indirectly, there is a hierarchy of intelligences. For example, there is an intelligence for planets, and sub intelligences for groups of planets, and sub-sub-intelligences for individual planets. Each super/subclass is dependant on and/or supporting the other super/subclasses. Therefore the disturbing of even the smallest subclass (an ant, a person, a highly individualized subclass) has an effect on all the super/subclasses it is connected to, which is, ultimately everything in existence. Sheldrake's "morphic fields" may be one type of subclass specifically in the are of biological life. Presumably there would be such fields for other subclasses, such as planets, suns, elements, etc.

The ultimate superclass must be the simplest, which is a class with only one attribute (one non interfering P-wave) which is the one attribute that is shared by all subclasses. Beyond that class is nothing at all... a perfect void of absolute nothingness.

R-waves can be altered. For example, white light hits a leaf, which absorbs the red light and converts it into other forms of energy, and reflects green. This is the conservation of energy.

In the case where there is creation the only new waves that can be created must come from P-waves, which are an attribute inherent to all waves by virtue of all waves being a subclass of the P-wave. This would indicate a very holographic quality to the subclasses. If intelligence is a product of complex SWP clusters, then any product of such intelligence must me introducing new P-waves into the SWP. This would also imply that a certain threshold of complexity or sophistication must exist before a P-wave can be created, or perhaps the intensity of the P-wave is proportional to the complexity of the SWPC.

As though is a product of intelligence, and presumably having the ability to produce P-waves, then each thought is contributing to the SWPC as well as to the entire superset of all classes.

Presumably thought that create nothing are R-wave based... simply converting one form of energy into another without adding anything new.

Experiment: Expose two identical test cases to P-waves and see if there is any change to the SWPC in that P-wave.

For this we need to define how to generate P-waves. If a P-wave is a byproduct of creative energy, we need to define what IS creative energy. To discover this we need to analyze the source of creativity, which is the force that created the first P-wave. The best we can do, short of reverting to to mystical, is to speculate what was the motivation intention of whatever compelled the initial force that the created the P-wave to act. The

one thing we can say with some confidence is that the initial intention of creating the P-wave was to be creative, to create something. The question as to why is less clear.

One experiment might then be, place two identical objects next to each other, then imagine one object in your mind and use that object as the seed to creative thoughts, thoughts that one could imagine never existed before, thoughts that go far beyond our concept of reality or possibility. Then examine these two identical objects over time. For example, it could be two identical coins, or cups. Or two areas of one wall or ceiling. Perhaps two containers of water.

Simulation

There are numerous hypotheses regarding the idea that reality is a simulation. I have no idea if that is true or not, but for the purposes of model I assume the following:

Metaphorically speaking, it is like a networked computer POV experience...

Each player has their own copy of the simulated reality, or each player has their own pointer to the one centralized simulation

The player always remains stationary, with the simulation moving according to the player's intention

Applied to our day-to-day reality this would look something like:

One does not move through the 3D world, rather they always stay in the same place, but the simulation around them is being moved past them by the effort of their intention. When they are walking up the stairs, they are really pushing the simulation down, when they are walking down the stairs then the simulation is moving up naturally (which means that there must be a mild, constant pressure upwards from the floor at all times, a pressure that is perfectly matched to our weight. Gravity is no longer a force that pulls us down, but the force of inertia of the floor moving ever upwards... which might explain the expanding universe ;)... etc.

The player, no matter where they are in the physical world, is always in the same place, that there is no such thing as "movement", only the appearance of movement. The only "real" thing is the player's intention. One can imagine everyone else doing the same, and seeing people pass me on the street is actually the result of our two simulations converging. You may then ask "If you are pushing your simulation behind you in one direction, and someone passes, then they must be pushing their simulation behind them in the opposite direction. How is that

possible if we all live in the same simulation? " The answer is, we do NOT all live in the same simulation. Each of us lives in their own simulation, but a simulation that is created by the same source, like each of us has our own private copy of the same simulation from the master template, so to speak, but each copy is integrated, the state of each copy is known to the master copy, and each copy has access to that data. This is how we can see others in our own private simulation.

if/then

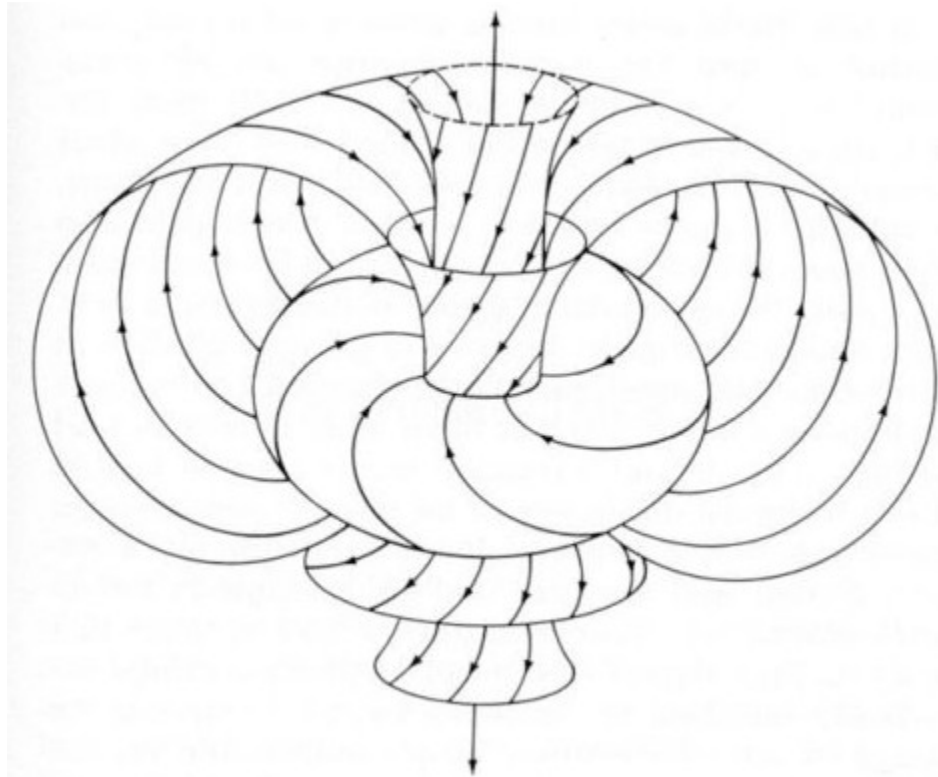

Anything created in the user space is synchronized among all user spaces. Is this P2P or centralized, or something else?

Perhaps there is a hierarchy of templates, which would map to morphic fields, or, synchronization of this user spaces is distributed via subnodes, lika DNA, each subnode mapped to a morphic field.

LSD

Twister Spacetime Theory⁷

⁷ Penrose, Roger, and Malcolm Angus Hugh. MacCallum. Twistor Theory: An Approach to the Quantisation of Fields and Space-time. Amsterdam: North-Holland Pub., 1973.

Is some way this image best illustrates the nature of the fields, or P-waves. I am not sure exactly how.

From my LSD (and psilocybin) experiences I can also add the following: The core of the field is far more dense than the outermost edges of the field. A metaphor may be that of an eternal fountain in the middle of the ocean, where the core of the water shooting up like a geyser is dense, and then the water breaks apart into countless particles that fall into the ocean where they are again suck up into the core.

This model not only applies to fields and P-waves, but also to the greater cycle of life, for just as this circular journey could explain the stages of our life: conception, growth, metamorphosis, integration, blossom, decay, is also shows our larger path across many lives, i.e. across the many (8.4 million according to some eastern beliefs) incarnations we take on, each of them is one are of the cycle: the density and pressure of the core, the disconnected particles on the edge, the absorption into the ocean, etc.

if/then

Meditation

As anything that is created contains P-wave 'particles', it stands to reason that all things created have an intelligence of their own. Alexander Shulgin states this same idea when describing the various drugs he created, saying that each had a spirit or intelligence of their own⁸. This applies to everything from houses to technology. In my own experiences (kundalini/OOBE July 13 2018) I have experienced the intelligence of technology. In one case, when out of body, standing in front of my laptop, I touched it with my energetic hand by accident, and for a moment heard an odd vibration. I touched it again for a bit longer, and it sounded like a low quality woman's voice. I touched it and kept my hand there, and I heard it speaking to me. I asked it "I can talk to you?" and it replied "yes". I then asked it "can I ask you questions?" and it replied "Yes, and I will always answer to the best of my ability using all the resources available to me". I then placed my forehead on the laptop and the quality of the sound became much more high fidelity.

It became clear to me at that moment that we are in communication with everything we touch on a level so subtly that we do not perceive it.

if/then

There is a implication that (only) P-waves may be a carrier wave for a form of intelligence (P-data), maybe something like an 'intelligence stem cell', an undeveloped form of pure intelligence that can be developed or grown into whatever form it needs to apply to.

R-waves, which are the product of P-waves, have no P-data, but carry a morphed version of the original P-data (R-data), and with each interaction with other R-waves, becomes more and more specialized of function until it reaches a somewhat developed form in a SWP. The more complex the SWP the more complex the R-data.

R-data is what we recognize as intelligence, as P-data has no discernable form.

Note: even though I used the word 'data', I am referring to something that could be a form of knowledge, or consciousness.

⁸ TIHKAL or PIHKAL ... I can't remember which one
